

ConSlitter *Dual turret slitter*

SLITTER. WINDER. KAMPF.

ConSlitter Dual turret slitter

Two in One. For flexibility and throughput.

You always want to have the right answer to the changing requirements of your customers and at the same time increase your production efficiency? With the new **ConSlitter** you are optimally positioned for the future.

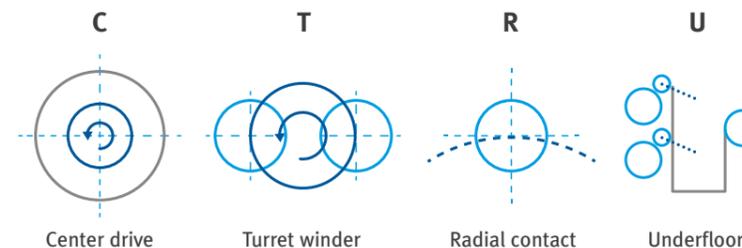

The combination of the proven KAMPF classic Conslit with the advantages of our modern turret technology enables you to reduce downtime and sustainably increase production throughput, especially when processing smaller batch sizes.

Select from our extensive modular system the equipment features that optimally meet your individual production requirements

- Reduce set-up times
- Automate roll logistics
- Realize data transfer

We certainly have the right solution for you.

Efficiency.
A definite strength
of the **ConSlitter**.

Stagnation is regression.
Simply increase uptime.

- Simple and reproducible – laser liner support fast and precise positioning of the rewind cores.
- Fast and extendable – save time and effort by using an integrated finished roll push-off system and extend this automation with a core positioning module on request.
- Effective and safe – do other important tasks while your valuable finished products are automatically transferred to further handling operations with the appropriate removal module and without further operator intervention – and the **ConSlitter** is already producing again.

Security in a new light.
Industrial safety
with a clear view.

Technical Data	ConSlitter CTRU BlueLine
Material	plastic films, refined papers, laminates
Material thickness	10 – 500 µm
Material widths	1,450 1,750 mm
Parent roll diameter	1,000 1,300 mm
Finished roll diameter	max. 630 mm
Finished roll weight	max. 600 kg (depending on equipment)
Slitting system	razor blade cut shear cut
Slitting widths	≥ 50 mm
Winding cores	3" 6"
Machine speed	max. 800 m/min

For more information
please visit our microsite.

Improved awareness brings more security to your everyday life. An intelligent lighting concept communicates the current status of the machine. A color lighting system that changes according to the situation allows you to monitor the status

of the machine both in the area around and from a distance. The other redesigned and fully integrated safety devices also provide you with a constant overview, even at a safe distance.

800 m/min

max. machine speed

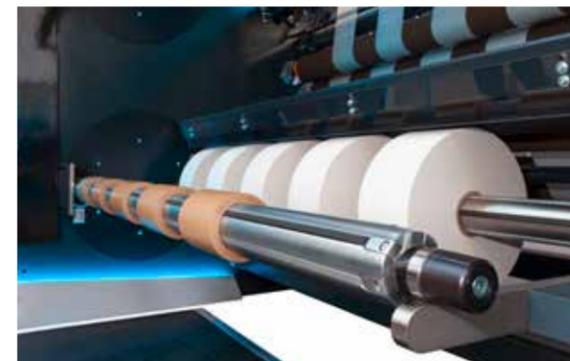

630 mm

max. rewind diameter

ConSlitter

A modular system.

Customized for your application.

Expansion winding shafts
Safe production for simple applications.

Friction winding shafts
For reproducible quality and demanding materials.

Shear cut
The all-rounder for high quality with long service life.
Optionally also with automatic positioning.

Razor blade cut
Reasonable and good. Optionally as groove or mirror cut.

Positioning aid
Time-saving and precise alignment for bottom knife and razor blade grooved bushes.

Splicing table and web control
High-quality web connections – made simple.
Choose the optimum splicing table.

Look and Feel. Operator comfort in a new design.

Simplified machine operation, optimum accessibility and integrated safety are combined by a completely new design and color concept.

The intuitive KAMPF 2-touch operation is an integral part of the striking industrial design, such as the newly designed workplaces or the future-oriented handling and digitization solutions.

Behind the shape of the new **ConSlitter** there is, of course, as usual the state-of-the-art Siemens control system combined with precise drive technology and proven mechanical engineering.

Beyond Slitting and Winding.

More than just a slitter.

Productivity, availability and quality are key competitive characteristics.

To ensure these features and thus your long-term success, we offer a wide range of value-added services for your machinery.

With your decision for a new **ConSlitter**, you can also benefit from this individually tailored option for you.

- Automation solutions
- Material flow simulations
- Connectivity of upstream and downstream processes

We offer highly efficient complete solutions, adapted to your needs and the requirements of your customers.

Our KAMPF Lifecycle Service is available throughout the entire life span of your machines.

Kampf Lifecycle Services. Efficiency, availability and preservation of value.

Our offering for you. Lifelong and worldwide.

- Commissioning and service at site
- 24/7 online support via KAMPF Service Portal
- Spare parts services
- Individual service advice and maintenance packages
- Retrofit packages for optimizing older machine
- Second-hand machines
- Machine relocations

The KAMPF Academy also offers tailor-made certificate courses.

- Machine adjustment and operation / HMI, TIA and S7
- Maintenance and service
- Specific process engineering
- Slitting technology

Use this machine-specific service in our company, on site or online.

Automation. One-stop added value.

- Increasing demand?
- Short delivery times?
- Cost pressure?

We are happy to support you with the development of tailor-made solutions thanks to our expertise in:

- Simulation (Digital Twin)
- Continuous communication and data flow
- Planning, project management and implementation

KAMPF offers coordinated automation within and in the machine environment for optimum use of your **ConSlitter**.

- Automated finished roll removal
- Advanced robot systems
- Conveyor belts/transport carts
- Weighing devices
- Roll marking system
- Palletizing and packaging units

Converting 4.0. Digital added value for you.

Smart Production. Be efficient!

Smart Maintenance. Stay efficient!

Smarter Operation. Increase efficiency!

With our innovative software platform **the@vanced**, we now inform you about the status of your production anytime, anywhere and conveniently, and enable you to communicate simply and data-based, beyond machine parameters.

Your production
at a glance.
Fast and mobile.

the@vanced:

- Is an integrative software platform that networks the KAMPF machines, their integrated sensors and additional components.
- Gives you the possibility to collect important data, to visualize and analyze them individually.
- Communicates easily with your planning and control systems on site as well as with other external software platforms.
- Is the basis for big data applications, artificial intelligence, predictive maintenance and machine learning.

We consciously rely on networks to actively create new technologies at the extremely high development speed of Industry 4.0 and achieve the maximum benefit from generated data for your process.
